Issued June 20, 2017 2:32 AM CT

NWSMidland

weather.gov/maf

Temperatures will warm around 5 degrees above normal this afternoon. An isolated thunderstorm or two could form in, or near, the Davis Mountains. Gusty winds may occur with any storms

Potential Tropical Cyclone Three

- Disturbance has a high potential of becoming a Tropical Storm, so Tropical Storm Watches and Warnings have been issued for the Northeast Texas and Louisiana coastlines.
- Deep South Texas impacts: increasing swells, rough seas, coastal flooding, high surf and dangerous rip currents.
- Continue to closely monitor the latest forecasts at weather.gov/rgv and nhc.noaa.gov

NWS Brownsville, TX

Find official National Hurricane Center
forecasts at: www.nhc.noaa.gov

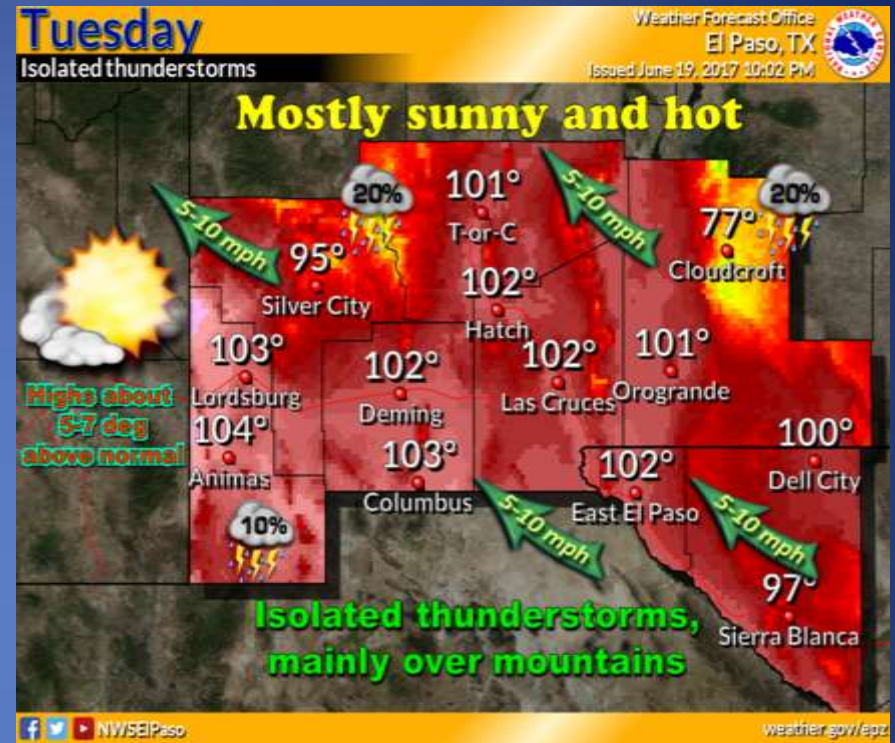

Potential Tropical Cyclone Three is starting to become better defined and continues to have a high probability of becoming a Tropical Storm. Though there is some uncertainty still with the track, direct impacts to Deep South Texas may focus more on dangerous seas and coastal flooding. Stay tuned to the latest forecasts at weather.gov/rgv and nhc.noaa.gov.

Hazardous Weather

Strong to severe thunderstorms are expected to develop by mid to late afternoon today and continue into the evening hours across the Oklahoma Panhandle and northwest half of the Texas Panhandle. Strong damaging winds of 60 mph or greater and also large hail will be the primary hazards from the severe storms.

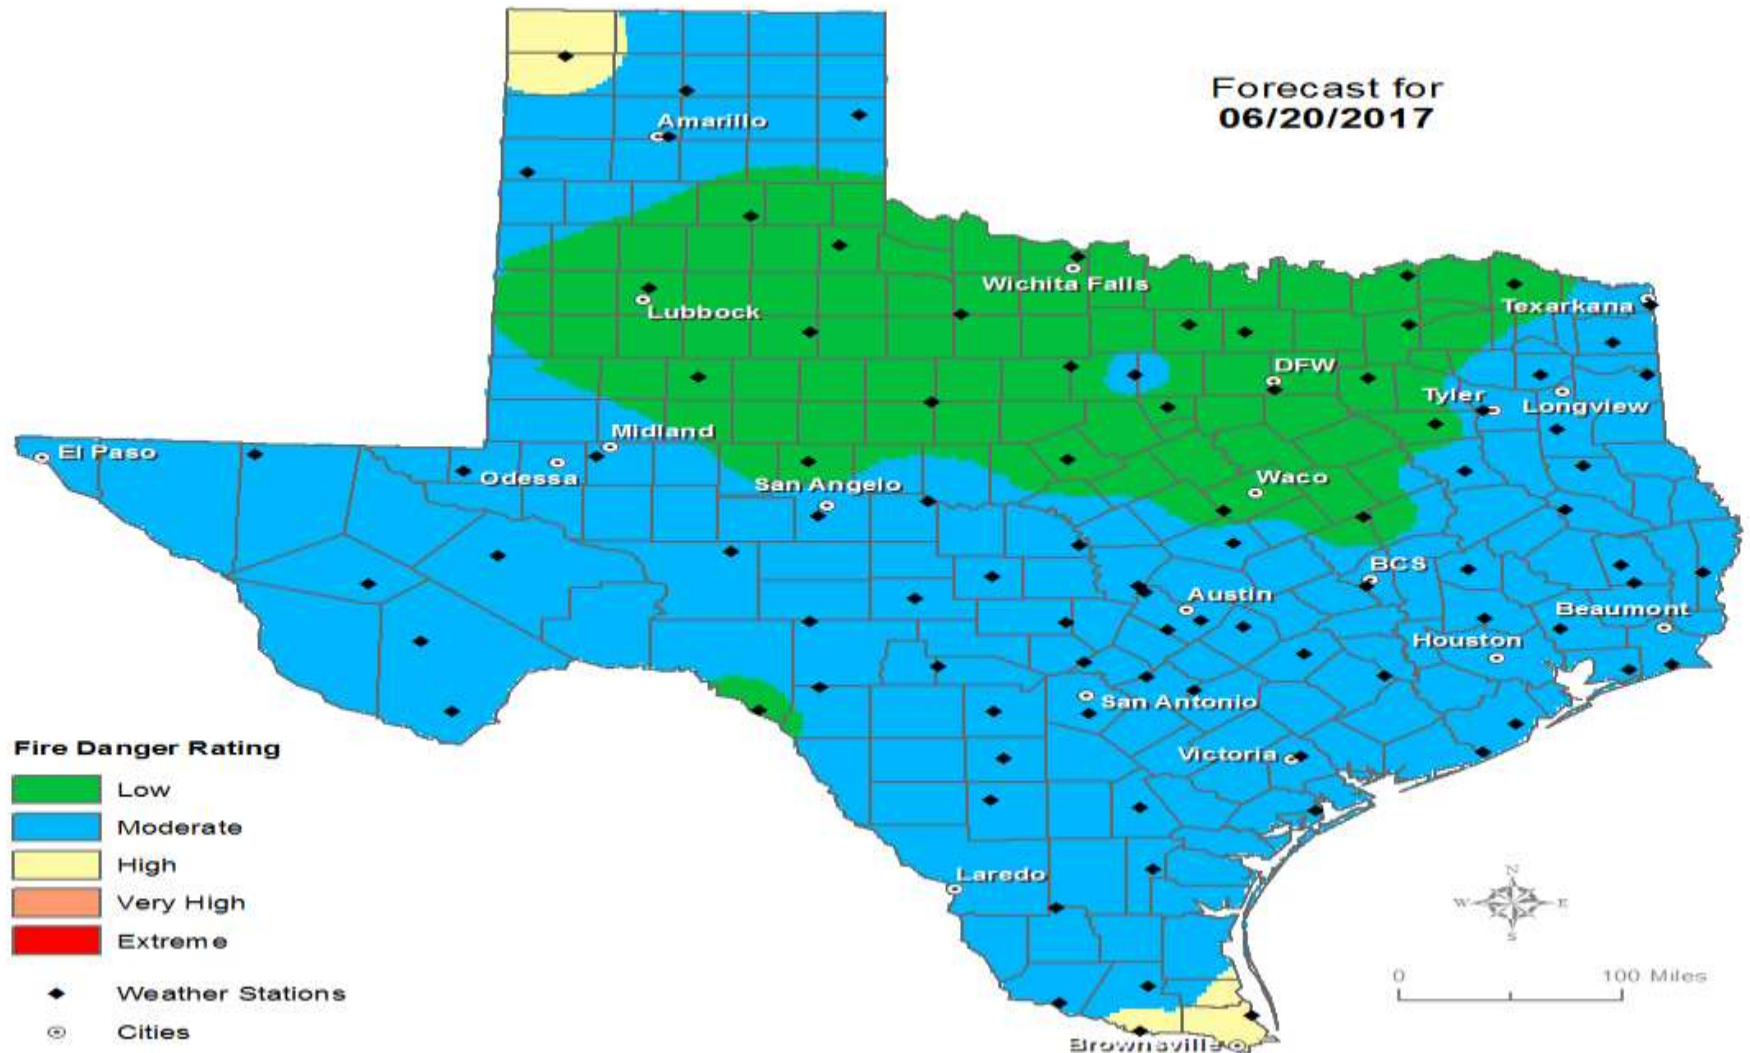

Low level moisture and instability will persist to produce isolated thunderstorms, mainly over mountains. Upper high will tamp down most any chance for a thunderstorm over the lowlands. High temperatures will remain well above normal

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
06/19/17	Flood Advisory	Bosque County
06/19/17	Severe Thunderstorm Warning	Brewster, El Paso, Hudspeth, Jeff Davis and Presidio Counties
